

Usability Test Script - Project 3

Data Points to Note About Each Tester

- Device type, operating system
- Device orientation preference, if any
- Familiarity with to-do list apps

Script

Hi there, and thanks for helping me out today. Before we begin, I want to go over the task you'll be doing today. I've created a tutorial that offers a basic look at a to-do list app called Todoist. I'd like you to watch the tutorial, then based on what you've learned from it, do a few tasks in the app for me. After you're done, I'll ask you some questions about your experience. Sound good?

One thing I want to be clear about: This process is testing me and the tutorial I created, not you. If after watching the tutorial you still have questions about how to use the app, that's feedback for me, because it means I didn't explain it well. So don't feel bad if you have trouble with the tasks – that just means I need to make some changes!

Okay, let's get started. First I want you to watch the tutorial, without any further explanation from me.

Link: <https://youtu.be/2yMz9uN1ITg>

- The first task I want you to do is to create a task and set a due date.
- Next, choose an existing task in the sandbox and reschedule it.
- Finally, create an overall project with subtasks.

Now I have a few questions about the look and feel of the tutorial:

- Would you recommend this tutorial to a friend who wanted to learn how to use Todoist?
- Overall, does the tutorial seem polished and professional?
- Would you watch other tutorials in this style?
- What parts did you most and least enjoy about the tutorial?

Thanks for your help – you've given me some great feedback, so I'm going to get started on revising this tutorial. I hope you enjoyed this process.
